PROFILE SUMMARY

Highly motivated master's student specializing in interaction-focused UX design, with strong prototyping skills in AR/VR systems. Experienced in designing immersive interactions, conducting user studies, and iterating on interaction techniques through academic and project-based prototyping. Adept at bridging user research, interaction design, and technical execution to deliver engaging immersive experiences.

EDUCATION

University of Glasgow, Glasgow, UK Sept. 2022-Jul. 2025
B.S. in Computer Science
Core Curriculum: *Database Systems*, *Software engineering*, *Algorithms & Data Structures*, *Mobile HCI, Extended Reality*

University of London, Goldsmiths, London, UK Sept. 2025-Sep. 2026
MSC Virtual and Augmented Reality
Core Curriculum: *Augmented / Virtual Realities*, *Game Programming*, *Approaches to play, mathematics, Motion Capture*

SKILLSET

- **UX Design:** Immersive Interaction design, usability testing, user studies, iterative design
- **XR Tools:** Unity, Meta XR SDK, XR Interaction Toolkit, Auto Hand
- **Design Tools:** Figma
- **Frontend Prototyping:** HTML, CSS, JavaScript, Vue.js, React
- **Technical Skills:** Python, Java, C#, Git, MySQL

INTERNSHIP EXPERIENCE

Soochow Dejiewei Digital Technology Co., Ltd., Suzhou, China (Designer & Developer) Dec 2025 – Jan 2026

- Researched VR locomotion comfort issues and implemented multiple movement strategies, including teleportation, smooth locomotion, and vignette-based FOV reduction, to reduce motion sickness.
- Identified mis-triggering issues in drawing interactions through **user feedback**, implemented refinements to brush, spray, and controller grabbing logic, and iterated on the solution through **usability testing**.
- Conducted and analyzed **UX testing**, translating user feedback into an **interaction evaluation framework** for iterative improvement.
- **Designed and implemented** client–server interaction flows to support real-time content updates and reliable user response submission.

University of Glasgow — AugSoc Research Project (AR Development & User Research) Jun – Sep 2025

- **Designed and implemented** an AR graffiti interaction prototype exploring both 2D surface-based and 3D spatial interactions, including spraying, path drawing, dragging, and scaling, to support expressive public art creation.
- **Designed and conducted a mixed-method user study (N = 18)**, combining questionnaires and semi-structured interviews to evaluate interaction usability and user experience.
- Synthesized findings into an **AR public art interaction framework**; paper accepted at **DIS 2026**

Suzhou Shiji Technology Co., Ltd., Suzhou, China (Product Manager) Dec. 2023-Apr. 2024

- Contributed to the product design of an **AI learning platform**, focusing on gamified reward mechanisms and AI-assisted learning features to improve user engagement.
- Conducted **market research and competitive analysis** on AI education products, analyzing core features, workflows, and implementation strategies across functional modules
- Created **product prototypes, user flows, and concept maps**, and proposed multiple solution aligned with user needs and product requirements
- Led the **redesign and iteration of data center features**, designing data visualizations and dashboards to improve usability.
- Supported feature validation by generating test datasets and collaborating on testing workflows to evaluate design effectiveness.

ACADEMIC PROJECTS

Abyss — Physics-Based VR Horror Prototype (*Personal Project*) Feb 2026

- Designed a physics-based VR narrative experience exploring scale, embodiment, and psychological tension

- Implemented gesture-driven locomotion and hand/finger tracking systems to integrate body movement into core gameplay
- Constructed large-scale environments with spatial 3D audio to amplify megalophobia and immersion

Emotional Mask — VR Game (*Game Jam Project*) Feb 2026

- Designed and implemented **VR gesture-based interactions**, mapping hand gestures to in-game interaction events
- Contributed to **level logic and narrative flow design**, ensuring gesture interactions were tightly integrated with gameplay mechanics and storytelling

Project Link: https://github.com/kjie11/EmotionalMask

AR Escape Room Game *(Team Project)* — Level Design & Gameplay Programming Nov-Dec 2025

- **Designed** an AR escape room experience blending virtual elements with real-world environments, focusing on spatial interaction and puzzle-driven engagement.
- **Implemented AR interactions** combining virtual manipulation with real-world passthrough.
- **Design and Integrated** machine learning–based handwritten digit recognition and QR code detection as in-game puzzle mechanisms.
- **Acted as Team Lead**, coordinating team workflow, assigning tasks, and ensuring timely delivery across design and development milestones.

Project Link: https://github.com/SophiaSun0819/TheUncagedPact

Speaking World — *AR Interactive Prototype (Personal Project)* Oct 2025

- **Designed and implemented** an AR interactive prototype exploring **object-level conversational interaction** through real-time environmental perception.
- Integrated passthrough vision with **LLM-based dialogue** enabling users to converse with virtual representations of physical objects.
- Designed a **real-time interaction pipeline** connecting perception, semantic understanding, and speech-based feedback

AR Graffiti Prototype — *Tangible AR Interaction Research Project* Oct 2024 – Mar 2025

- Designed and implemented tangible AR interaction techniques in **Unity on Meta Quest 3**, including direct placement, path-based interaction, spray painting, coloring, and drag-and-drop
- Conducted user studies combining **questionnaires and interviews** to evaluate interaction usability and inform iterative refinement
- Authored a **research paper** documenting the design, implementation, and evaluation of tangible AR graffiti interactions preference

Project Link: https://github.com/kjie11/ar_graffiti

Design Project of Wearable Devices — *Research, Design & Game Development* Sep – Nov 2024

Project Description: This project involves designing a wearable device with a game level challenge feature that aims to help beginners gauge muscle strength and engage in effective exercise.

- Conducted user research on fitness beginners through **questionnaires and interviews** to identify core needs and pain points
- Designed **gamified interaction prototypes** in Figma, including level-based challenges, reward mechanisms, and visual feedback
- Designed an **adjustable wearable form factor** to accommodate different body types, balancing ergonomics and sensor placement
- Developed interactive game content using **Unity** to visualize workout progress and enhance engagement and clarity

WebXR Art Gallery Project — *Research, Design & Development* Feb -Mar. 2024

- Independently conducted **end-to-end research, design, and development** of a mobile-friendly WebXR art gallery
- Designed and implemented **multiple multimodal interaction techniques**, including rotation, gaze-based input, device shaking, voice input, and gesture control, to explore alternative input modalities in WebXR.
- Implemented interface and interaction design with a **user-centric approach** to ensure a smooth experience within the virtual environment
- Designed and conducted a **user study (N = 6)**, collecting both qualitative and quantitative data to evaluate interaction usability and user experience.
- Iteratively improved the interface and **adjusted interactive feedback** parameters based on experimental results
